

PVC STANDARD SUPPORTS

SKU: N/A

Using **PVC STANDARD SUPPORTS** in a floating floor is the best way to easily inspect a paved surface without any demolition.

The **PVC STANDARD SUPPORTS** should be placed on the edges of the tiles and even if it has a fixed height (15 mm ca) it can be easily fitted with different PVC supports (we suggested some thick supports) in order to have a perfect planar "floating" floor or it can be put on top to get double heights, if necessary.

On the upper part that houses the floating floor are printed 4 spacers with a thickness of 5 mm. which can easily be cut for laying along walls or columns.

Standard **PVC SUPPORTS** are supplied in bags of 150 pieces.

PRODUCT DESCRIPTION

PVC SUPPORTS

PVC products are used to make raised floors especially in flat roofs or technical rooms (to allow the passage of cables or systems in general).

Using PVC SUPPORTS in a floating floor is the best way to easily inspect a paved surface without any demolition.
