PRODUCT DESCRIPTION

The **ARDESIA**, a metamorphic rock of sedimentary origin, is also known as "**LAVAGNA**", a word that

comes from the name of the homonymous locality of the Riviera di Levante that until the last century was the Italian commercial center of this material.

Since the **ARDESIA** tends to lighten since the moment of extraction, becoming a light gray pigmentation (the dark shade is due to carbon residues that volatilize once in contact with oxygen, humidity and ultraviolet radiation). *Wet effect* that brings out the intense black color of the material.

Being a marble that tends to flake, it is particularly appreciated with the "*natural split*" processing that gives the surface a rustic and natural effect.
