PRODUCT DESCRIPTION

ETRUS

ETRUS is a high-strength concrete slab which, with its particular "diagonally chiselled" surface and its appropriate colour, perfectly imitates the characteristic of natural Pietra Serena slab used for centuries as squares, streets and courtyards pavings of the most beautiful cities around Umbria and Tuscany region.

The particular conglomerate, made exclusively of ferrous quartz and porphyry chips, makes ETRUS 677 (625) by far more resistant to wear and weathering than natural Serena stone slabs. And the cost is much lower. The cost of much lower is also not marginal.

To match the paving , we have in our production STRAIGHT and CURVED versions of kerbstone (presented in the section URBAN FURNITURE).
