PRODUCT DESCRIPTION

THE BENCHES

Since twenties, we have been producing and manufacturing **BENCHES** in highly resistant marble chips.

Our **CONCRETE BENCHES** have been used as a way of our grandfathers could rest, read, dream and

fall in love in many avenues, parks, stations and gardens. We thought that the technological era would have made our benches old-fashioned. Instead, international urban designers convinced us to increase this particular production and to improve the product, making it even less liable to damage from the wear and frost or acts of vandalism

Our **CONCRETE BENCHES** are produced in white marble chips and white highly resistant super-cement and they are specially processed against atmospheric agents.

Mattoli benches made of marble chips (or of natural stones) are produced in several models, such as "espalier", "pillow", "little pew". Apart from the standard models in the production range , over time many other types of benches have been designed and manufactured with the help of designers and technicians for some Italian and foreign squares and avenues.

The common denominator of past and present productions of our benches is "LAST FOR CENTURIES".
